

# VETRAZZO, THE COOL CHOICE FOR POLAR BEAR EXHIBIT

## COMO ZOO — ST. PAUL, MN

After two years of construction, Como Zoo in St Paul, MN recently opened their new Polar Bear Odyssey exhibit. The bears were temporarily housed at the Detroit Zoo. Today they are back home enjoying life in their new digs. This World Class Exhibit features 13,140 square feet of outdoor living space with a state of the art Holding Building which is 3,260 square feet.

In keeping with Como Zoo's most stringent requirements for giving both the animals and the visiting public the greatest experience possible while maintaining a natural environment; Vetrazzo's Cubist Clear was chosen for the countertops in the Outpost visitor center, the gift shop, and the restrooms. Cubist Clear was the easy color choice, being reminiscent of the polar bears' natural habitat of ice and snow.

Using glass from curbside recycling programs and other post-consumer sources which make up 85% of the product, along with a concrete base, **Vetrazzo** is one of the greenest surface materials available. **Vetrazzo** helps to create healthier environments – indoors and out.
